OVL SERIES - SCONCES Legion Lighting

Legion Lighting, an established manufacturer celebrating their 70th year in business, is a leading manufacturer of quality fixtures for a range of applications. Along with industrial and commercial fixtures, they've recently expanded their line to include LED sconces that are both decorative and efficient. The OVL series sconces are versatile and modern, and will work for a range of applications.

The OVL is a curvilinear sconce that features rounded edges and an illuminated center. The series comes in three options in varying shapes. The Slot curves to almost touching with a gap in the middle, the tapered in creates indirect light through reflectance and the tapered out has a narrow front-plate for more direct illumination.

All three sizes are made from aluminum and have a white finish. The fixtures are COB and available in 3000k, 4000k, and 5000k. All of the sconces are available in 120v or 277v, and can be Triac dimmed with 120v. They are all less than 4" deep and are ADA compliant.
