

SPOTLIGHT

NOCO LIGHT SHOW REVIEW

Thursday, April 14th, 2016 was CT Lighting Sales' inaugural NoCo Light Show, a tradeshow dedicated to the Northern Colorado and Southern Wyoming markets. The event saw great success thanks to the hard work of employees as well as great manufacturer sponsors, and the team is already looking forward to hosting the next one.

With the addition of Lorraine Vollmar to our team, CT Lighting Sales is expanding itself into the Northern Market, and the NoCo Light Show was a launching point to these future relationships. The attendees to the tradeshow got to see a variety of lighting solutions ranging from commercial applications to high-end architectural options and lighting controls.

The daytime event not only featured great sponsors, but also had an AIA presentation presented by Cree Regional Manager Brian O'Sullivan. O'Sullivan spoke on quality of light and educated the attendees on CRI, CCT and the benefits of balanced R-values in LED Light. This CEU accredited presentation was both informative and conversation-sparking and gave attendees something to consider when purchasing LED lighting options in the future.

CT Lighting Sales is looking forward to expanding its market into the Northern Colorado region, and believes that this informative tradeshow was just the beginning of a fantastic relationship with the area.

THANK YOU TO ALL OF OUR BOOTH SPONSORS!

The SCEM is suitable for medical locations as well, including ICS, MRI rooms, reception areas and lobbies. The SCEM is a recessed and wall/ceiling surface mount fixture that features many of the same options of the SCE series, but has some added features specifically for the medical field. The fixture is coated with an Anti-microbial white paint, and has the option of a custom graphic lens which is often asked for in patient-areas of various medical buildings. The SCEM also features a 100% aluminum body with welded seams and stainless steel hardware, and is tested for trace magnetic properties to ensure no ferrous materials exist in the fixture.

Both the SCE and SCEM series have a wide range of lumen outputs ranging from 2000lm to 6000lm, depending on the configuration. Both are single-circuit, and can have remote drivers where needed. The range of lumen outputs, diffused light through AccuRay® and medical options make the Metalumen SCENE series is a highly-adaptable fixture that can create uniformity in a variety of applications.
